Professional Summary

Software enthusiast and final-year B.Tech ICT student at Adani University with internship experience in e-commerce development and QA testing. Passionate about building practical applications, solving problems, and exploring new technologies. Skilled in JavaScript, TypeScript, Python, React, Next.js, REST APIs, and AWS, with a growing interest in Go, backend engineering, and distributed systems.

Technical Skills

Languages: Go (Golang), Python, JavaScript, TypeScript, SQL
Frontend: HTML, CSS, React, Next.js
Backend: Go (net/http, pgx, go-redis, JWT/golang-jwt, bcrypt), Node.js, Express.js, NestJS, FastAPI, REST APIs, Microservices, Event-Driven Architecture
Database: PostgreSQL, MongoDB, Redis
Cloud & DevOps: AWS (S3, RDS, SQS), Docker, Docker Compose, Nginx, Git, GitHub, GitHub Actions
Platforms: Odoo 19 (custom theme development, website editor components, backend views)
Testing & QA: Functional Testing, Integration Testing, Manual Testing, Bug Reproduction and Retesting, BLE/Wi-Fi Device Testing, React Native App Testing
Data & ML: Machine Learning, LightGBM, Classification, Pandas, Optuna, SHAP, Data Processing

Industry Experience

Northstar Innovations - *Software Engineer Intern*
Jan 2026 - Jul 2026

- Developed a custom Odoo 19 e-commerce theme for a perfume brand, building reusable components and customizable website layouts.
- Built backend admin functionality for product category management and developed My Account pages for orders, returns, wishlists, and customer support..
- Tested a React Native IoT application, validating device communication over BLE and Wi-Fi and verifying scheduling and device-control workflows.
- Reproduced and reported bugs, fixed selected application issues, and performed functional and integration testing to verify fixes..
- Tested the app under multiple conditions, includeing scheduling workflows and control features, using functional and integration testing across the app, and IoT devices.

Projects

Go-Commerce - *Go, net/http, pgx, PostgreSQL, Redis, go-redis, golang-jwt, Docker, Docker Compose, GitHub Actions* | Code

- Built a Go e-commerce backend with net/http REST APIs for authentication using bcrypt password hashing and HS256 JWTs with issuer, audience, and expiry validation with auth middleware, RBAC , paginated product listing, and admin product create/update endpoints with stock in PostgreSQL and prices stored as integer cents.
- Implemented Redis-backed carts with TTL-based expiry and atomic updates, plus transactional order placement with concurrency safeguards to prevent stock overselling.
- Added idempotent order handling, a background worker pool, graceful shutdown, structured logging, request IDs, health checks, Docker Compose, GitHub Actions CI, and unit/integration tests for concurrency and retries

Composable E-Commerce Platform - *Next.js, NestJS, AWS SQS, PostgreSQL, MongoDB, Redis, Docker, AWS* | (Private Repository)

- Built an e-commerce platform with separate Next.js storefront and admin panel backed by independently deployable NestJS microservices for authentication, product, cart, orders, CMS, analytics, imports, notifications, and search.
- Implemented AWS SQS-based asynchronous communication with shared event contracts, retries, dead-letter handling, idempotency, Dockerized services, Nginx routing, and AWS infrastructure using RDS, S3, and MongoDB Atlas.
- Developed an admin panel covering product management, CMS, navigation, theme settings, orders, and analytics, along with responsive storefront flows for catalog, search, cart, checkout, account, and content.
- Implemented performance, testing, and reliability practices including p50/p90/p99 latency targets.

Stock Direction Predictor - *Python, LightGBM, Pandas, Optuna, SHAP, FastAPI, Streamlit* | Code

- Built a machine learning model using LightGBM to predict whether NIFTY 50 stocks may rise, fall, or remain flat over the next 5 days, using 180+ features derived from price trends, volatility, trading volume, news sentiment, and economic data.
- Developed a data pipeline combining NSE announcements, GDELT news, FRED economic indicators, and FinBERT sentiment analysis; built a FastAPI and Streamlit app to explore stock predictions, rankings, confidence scores, and SHAP-based explanations
- Evaluated the model using time-based validation, Optuna hyperparameter tuning, and historical backtesting with trading costs; compared results against a baseline and documented why the strategy did not generate net profit after costs

Education

Bachelor of Technology - Information and Communication Technology (ICT)
Adani University, Ahmedabad | 2023 - 2027 | CGPA: 7.79/10

Higher Secondary Education
Royal School of Science, Dhoraji, Rajkot | Percentile Rank: 85.56

Hackathons & Activities

Odoo Hackathon, Adani University - *React, Node.js, Express.js, MongoDB, Socket.Io* **Jan 2026**

- Worked in a team to build Cafe POS, a full-stack restaurant POS web app, in a 2-day hackathon.
- Features: QR-code table ordering for customers, a real-time Kitchen Display System, a cashier terminal, and an admin dashboard, with role-based access and live order Updates.

Hackout, DA-IICT-Gandhinagar - *Next.js, Tailwind CSS, Google Genkit, Firebase* **Aug 2025**

- Built Community Mangrove Watch, a mobile-first app for reporting coastal and mangrove incidents, with photo upload, GPS location tagging, and an incident map.
- Used **Google Gemini (Gen AI) through Genkit** to verify and score submitted reports, with an admin dashboard for reviewing them.
